

**Drillcut** provide a variety of multi-purpose Morse hole saws with all the associated tools and products.

Comprehensive cutting edge saw blade solutions for the ultimate professional.

## Morse advanced Bi-Metal hole saws

The All-New Advanced Bi-Metal Hole, the latest sawing innovation.

### Features and benefits

- Patent pending tooth set design
- New cap - reduces runout and vibration
- Premium M42 high speed steel cutting edge, 8% cobalt - over 2X the life of our AV model
- Cutting depth - 1-15/16" (49,2 mm)
- Heavy duty .050 Side Wall - For greater stability
- New side slot - increased leverage for faster, easier slug removal

### Applications

Wood, plastic, machinable metals, stainless steel alloys, nail-embedded wood.

Optimized new teeth, designed to remove material faster

New coating reduces side wall friction for efficient cutting

## Holesaw mandrel

Durable, heavy-duty carbon steel mandrel's come complete with pilot drills. Adapt Morse hole saws to any power drill used by professionals.

Various shank sizes available from 3/8" or 1/2" drills

Hex arbors with non-slit jaw slots

## CARBIDE TIPPED HOLESAWS

Tungsten carbide tooth tips offer the highest wear resistance possible for fast holes and longer life when cutting abrasive materials. Cutting depth is 1-1/2". Arbor required.

### FEATURES

- Special tooth design for very fast holesaw cutting.
- Ground and set teeth help to cut materials that bi-metal holesaws will not cut.

## TUNGSTEN CARBIDE GRIT HOLESAWS

Long lasting choice for very hard abrasive materials. These holesaws create clean holes in materials too hard or abrasive for standard bi-metal holesaws, or so thin they would strip bi-metal or chip carbide teeth. Cutting depth of 1-1/2". Arbor required.

### FEATURES

- Super resistance to heat, wear and abrasion with shock resistant back.
- Tungsten carbide grains are bonded to alloy backs with a gulleted snag resistant edge.
- CT pilot drill recommended for masonry materials.

### APPLICATIONS

Acoustic tile, brick, cast iron, cement board, ceramics, cinderblock, composites, computer flooring, fiber-glass, hardened steel, particle board, asbestos board, and Formica.

## SPADE BITS

A popular item for boring small holes through wood. Shank works with 1/4" Fast-Adapt.

### FEATURES

- Produce a cleaner hole with less vibration with the angled spur.
- Uses bit to pull lead wire back through the drilled hole.
- 1/4" (6.4mm) quick change shank size fits all power drills.

### APPLICATIONS

Wood, plastic, plywood, formica and wood composites.

## AUGER BITS

Premium double fluted auger bits provide excellent deep boring in wood and nail-embedded wood applications. Precision ground, heat-treated and tempered cutting edges cut through nails.

### FEATURES

- Self-feed screw point for effortless boring.
- Double flute design for fast chip removal and less clearing of bit.
- Resharpener edge allows for quick touch ups to maintain edge and life of bit.
- 7/16" quick change shank allows for use with quick change chuck.

### APPLICATIONS

Wood and nail-embedded wood.

## RECIPROCATING SAW BLADES [MASTER COBALT®]

Triple the life of standard reciprocation saw blades, Master Cobalt® technology has a unique combination of features resulting in the longest lasting reciprocating blades available. They cut smooth, accurate, and offer great value.

### FEATURES

- Premium bi-metal reciprocating blade product.
- Wide variety of sizes for every professional cutting need.
- Available in 3 different thicknesses to meet flexibility and stiffness needs for various applications.
- Master Cobalt® Reciprocating Saw Blades have conventional shanks.

### APPLICATIONS

Machinable metal, wood, nail-embedded wood, composites, plastic and rubber.

## BI-METAL HACKSAW BLADES

Bi-metal hacksaw blades will bend and flex, resisting shattering for safer sawing and longer lasting blades. Cut wood, plastic or any machinable metal, including conduit, stainless steel tubing, angle iron, copper tubing, structural materials and more.

### FEATURES

- Vacuum heat treating creates harder edge for faster, easier cutting.
- High speed steel cutting edge with 8% cobalt for longer blade life.
- Increased heat and wear resistance for longer life.
- Flexible to prevent shattering during use.

### APPLICATIONS

Pipe, tubing, solids, wood, plastic or any machinable metal.

# DRILLCUT

#### Drillcut - Melbourne

15 Corporate Place  
Broadmeadows  
VIC 3047

SALES/SUPPORT  
03 8301 9999

#### Drillcut - Sydney

Unit 14, Cumberland Green Estate  
2-8 South Street  
Rydalmere, NSW 2116
